ABOUT US

Established in 2013 as a Singapore based entity, 9 Degree specializes in automotive air-conditioning repair and maintenance by offering different type of packages to our clients, allowing them to choose the package which will suit their needs. Backed with more than 10 years of combined experience in automotive air-conditioning maintenance and overhaul, our technicians are well versed with vast experience and knowledge on various automotive air-conditioning systems.

Having a team of professional and skilled technicians, we always endeavor to extend our expertise and believe in completing every job that surpasses customers' expectations. Excellent Reputation, Quality Workmanship, Competitive Pricing, Prompt Service and Sensitivity to Clients' Needs are our key business objectives.

We are a proud recipient of Sgcarmart Star Merchant 2014 and 2015 – Air Conditioned Repair Category Winner – for two consecutive years.

9 Degree Workshop

OUR SPECIALIZATION

A poorly maintained automotive air-conditioning system results in higher fuel consumption, premature compressor failure, unhealthy cabin air and loss of engine power etc. It may also bring about higher repair costs should the whole air-conditioning system breaks down eventually.

9 Degree provide a comprehensive range of air-conditioning maintenance and services for our clients including air-conditioning system flushing, replacement of air-conditioning cabin filter, checking of air-conditioning gas pressure and replacement of air-conditioning oil, amongst many others. Clients can choose from our specially designed servicing packages to suit their budgets and needs

WHAT GOES WRONG IF A CAR AIR-CON IS NOT MAINTAINED PROPERLY?

1 Air-con oil that has not been replaced once every 30,000km or two years.

Air-con oil will deteriorate, become acidic and lose its viscosity, lubricating and heat transfer capabilities.

Results: Inefficient air-con which causes damages to air-con components.

2 Quantity of air-con oil and gas not inspected annually

Air-con gas leaks 5% to 15% per year through Permeation etc. (Reports from Kyoto/Montreal Protocol)

Results: Damages to compressor

3 Purity of air-con gas not checked annually.

Unprofessional workshops may fill your air-con systems with contaminated refrigerant.

Results: Air-con filled with HC is hazardous and flammable air-con contaminated with R12, R22 and air/moisture will lead to premature failure of air-con components.
